

DO SEC

Car door

Safe and durable, year after year

Safe benefits at a glance

- Comply with latest safety regulations
- Robust built, smoothly operating, low noise
- Fits all types of existing shaft swing doors
- Requires minimal space
- Quick and easy to install

Upgrade on safety

Space and budget limitations were economic reasons in the past to build lifts without car doors. But now the new European Guideline EN 81-80 (SNEL Safety Norm for Existing Lifts) stipulates the installation of a car door on existing lifts to protect passengers or goods from safety risks. A good reason to modernise your lift with a DO SEC from Schindler.

Build to perform long-life

With the DO SEC one essential value we placed emphasis on is persistent high-performance. Solid well-engineered, state-of-the-art technology, a robust construction and use of resistant materials ensure maximum reliability.

Designed for easy integration

The Schindler DO SEC can be installed easily in very short time. A smart option when budget restrictions and additional downtime prohibit a full upgrade of the complete door system.

Compatible with all types of existing shaft swing doors, the DO SEC requires a minimum of space. The self learning electronic of the DO SEC optimises the opening and closing cycle within the first installation. The speeds for opening and closing can be adjusted independently. Even the ecologically friendly standby mode can be tailored to your needs.

Schindler

Robust-built and safely operating

The door drive unit of the Schindler DO SEC is electronically controlled and ensures low-noise and fast-response door operation.

The mechanical coupling is solid, allowing smooth linear action of the car doors and quiet operation. The car door opens and unlocks the swing door reliably, compliant to EN 81-1/2. Long life guide rollers, a steel top track and an enforced sill provide for a well controlled motion.

The robust door panels automatically stop and reverse at the merest contact with an obstruction.

Smart aesthetics

The DO SEC is available in various layouts and finishes. The door panels come in stainless steel, in RAL colours or primed (RAL 7032 textured). You can find precisely the finishing for you. Guaranteed to please.

Combines new and old, a budget-friendly investment

Easy to install

Smooth door operation guaranteed: The long-life guide rollers

Stylish appeal in stainless steel or any RAL colour

Technical data
